## List of Figures

# 1 Project Team’s Organizational Approach

For this project our team meet occasionally in person during classes and after class in the Commons. Most of our time was used independently where we talked through text and call. We had on team member start coding and finish the project while the other helped and finished up the docs and presentation.

## 2 Schedule Organization

### 2.1 Gantt Chart:

## 3 Progress Visibility

So the way we kept each other up to date on the project was by using GitHub. We also used Overleaf for the documentation. We didn’t really assign tasks but did it off of initiative. Ryerson took a lot of initiative and finished a lot of the back end the app. While Aaron took the Documentation and presentation while helping with testing.

## 4 Risk Management

The approach we took was to be open and willing to talk about any problems we encountered.
